

I have Bachelor's Degree in Biotechnology and a Master's degree in Educational management both of which have helped me greatly get to where I am in my career; and as a parent, I aim for the best education for my children. I believe that all thoughts and ideas are subject to discussion.

I believe myself to be a well experienced high-school educator with hands-on method in providing appealing lectures for my students. In addition, I am responsible for training and guiding other teachers towards learning modern teaching practices and methods. I find myself successful in planning, evaluating and revising course material and methods of instructions further leading to the enhancement of the overall capabilities of my students.

I take myself accountable for developing a thorough evaluation system to help me weigh students' learning patterns, behaviors, etc. I am proud to also mention that I have been participating in academic and administrative committees that deal with institutional policies, departmental matters and academic.

Out of my educational experience and parental hopes; I wish I can serve you with all my potentials
